

Managing Natural Resources of the Dukagjin Plain

Selim Qevani

Faculty of Education, University of Pristina "Hasan Prishtina"

Abstract

The need for natural resources in the Dukagjini Plain is continuous because life and the wellbeing of the inhabitants depends on them. Their use is often coupled with sensitivity and fluctuation in the natural balance, creating difficulties in providing food, clean water and other resources to meet the needs. Therefore, to avoid irrational access to Dukagjini's natural resources, careful management and use is needed. To highlight this process we will address the legislative and institutional aspects that deal with this responsibility. Particular emphasis will be given to laws regulating the use and preservation of land, forests, waters, minerals, protected areas, medicinal and aromatic herbs etc.; the institutions responsible for managing responsibilities; challenges of Enforcement of the Law; to succeed with planned projects and funding; environmental problems such as erosion, demolition, land degradation, water pollution etc. At the end of this chapter will be analyzed the economic perspective of using these resources.

Keywords: management, natural resources, legislation, environmental protection, institutions.
