### Abstract

When the problems we face are complex and affect each other, then the decision making process is more difficult. In most cases we apply established policies or choices without knowing which the best choice is. To make appropriate decisions that can solve the problems encountered should be analyzed very well the reasons that create problems and their reciprocal influence. The mechanism that is mostly used in everyday decision making is based upon logic and experience. While in some decisions problems, instinct appears as a guide in the foreground, analytical structure of analytic hierarchy process enables feelings and instincts to organize and align with a shape that resembles human logic. Analytical structure of analytical hierarchy process enables feelings and instincts to organize and align with a shape that resembles human logic. Thus this analytical structure, gives people the opportunity to intervene in the most difficult and complex problems. This method is easily accessible and can be widely used in the banking system because of its dichotomous decisions.

**Keywords:** decision making, model, suggestion.
