Abstract

The war on terror has been an ongoing phenomenon for the past two decades. It has been a great challenge for the world to be able to neutralize our enemies in different aspects of our society. As we continue to move further into the 21st century we have started to encounter different new possibilities into working together for the best of our children. The problem is that the unknown enemy is no longer located in a certain state or region. We are continuously facing so called IT battle grounds or Digital Wars. The Cyber war has changed our lives completely. It has had a recent dramatic effect in the economies of several different countries. It has also changed the personal political background of certain significant individuals around the globe. The way we think and believe has taken a different turn in our society. It would be very logical to argue that if we are now able to trust the media or would it be worth choosing whom to trust. Cyber war has also had a strong impact in the Balkans. An unstable region where for the past few years has continued to have different cyber attacks amongst neighboring enemy countries.

Keywords: *Impact, Cyber attacks, Cyber War, IT-battle ground, enemy countries, Kosovo.*
