

Challenges for establishing digital distance learning platform: e-learning

Prof. Ass. Dr. sc. Ramadan Beqiri
*College "BIZNESI" Pristina,
Republic of Kosovo*

Abstract

Learning has been and it is a priority throughout human societies across the globe. The sacrifices to reach this stage can hardly be summarized by any publication. The achievements in the excavation of knowledge are sculpted and passed down from generation to generation. Hence, thanks to the sacrifice of our generations we are where we are. The extension of this sacrifice has been done in the Albanian lands in general, and in Kosovo in particular.

The rapid development of Information and Communication Technology has made it possible for us to convey our knowledge in real time from the teacher to student. Today, with smart devices and the Internet, one can easily find lessons on various platforms, even without moving physically to where he lives. Such platforms, while positively having the other side of the coin, play the guardian role of stopping many real-life processes from everyday life.

Based on the constant need for excavating new knowledge from different fields, pupils and students are always striving to find more sophisticated ways to achieve high results in their studies. For this reason, this research identifies the challenges of setting up a digital distance learning platform, now known as e-learning and m-learning. In this research you will find in tabular form the requirements of teachers from different settlements of the Republic of Kosovo (and not only) for different subjects to work from home on the digital platform. The research has also identified some teachers who have attended vocational training in distance learning digital platforms.

The difficulties that arise in completing such platforms are a challenge that is not easily overcome. Thus, the conclusions and recommendations will help eventual researchers in this field get the starting point for succeeding in this new methodology, which is a continuation of excavating achievements from previous generations.

Keywords: digital platforms, electronic learning from the distance, e-learning, m-learning, professional schools.
